

Photographing and Painting in Watercolor Shiny Still Life Objects

By
Marlene Gremillion

In this 4-5 day workshop we will set up a still life of crystal, glass, silver, copper and shiny pots which the students may bring from home which I strongly encourage so I do not have to haul a lot. I will bring a variety of colorful fabrics. We will be photographing from different angles and set ups and then choose the photograph we will be using as our reference. You will learn to set up a still life, photograph for interesting compositions, use of lighting. Some use of technology will be taught along with transferring the design to watercolor paper. Many watercolor techniques will be demonstrated with students having time to work on their own.

You will need a camera, or digital phone that takes pictures. Bring your tablet or i-pod for use during painting.
